## INTRODUCTION

**Imperial International School** was founded on cumulative expertise in education and extensive research into the world's leading school systems and curriculum development. **Our vision** is to create a holistic learning environment that serves the community at large and students in particular, while fostering a familial atmosphere where care and respect embrace everyone. This nurturing approach paves the way for the bright future we envision for our students.

The school is organized into three sectors: one dedicated to male students in Grades 1–3, another for female students in Grades 1–12, and a Kindergarten that welcomes children from ages 3 to 6.

Instruction in core subjects—Language Arts, Mathematics, Science, STEM, and Social Studies—is delivered in English. Additional subjects and activities complement the curriculum to ensure a well-rounded education that equips our students for the future.

At Imperial International School, we believe that every child learns in a unique way. Therefore, we adopt a variety of teaching methods to meet each student's needs. Assessments are used not only to evaluate the ability to retain knowledge but also to measure how students apply what they have learned.

Our ultimate goal is to provide an education that prepares students for real-life challenges and nurtures them as lifelong learners. We also aim to enrich their learning journey through the fine arts, fostering creativity alongside academic excellence.

## School Description

Imperial International School (IIS) is located in one of the most prestigious neighbourhoods of Jeddah, Saudi Arabia. IIS is an international, non-discriminatory, English-medium school that serves both expatriate and local communities. The school is co-educational from kindergarten to Grade 3 and exclusively for girls from Grade 7 through graduation. It operates under the supervision of the Ministry of Education and is accredited by Cognia.

At IIS, we appoint highly qualified and experienced teachers while also welcoming fresh graduates with innovative ideas and the drive to prove themselves. We are committed to continuous professional development, ensuring that all staff remain up to date through regular workshops and training programs. As an international school, our faculty represents diverse nationalities, carefully selected for their qualifications, teaching approaches, and clarity of communication.

The school has continuously enhanced its facilities to enrich the student experience. Dedicated rooms for non-core subjects, additional laboratories, libraries, and a canteen have been added to support academic growth and extracurricular activities. Imperial International School provides a safe, welcoming environment where students feel comfortable and happy in what we consider their “second home.”

We believe that school is not only a place for academic learning but also a space where students learn to use technology and resources wisely, discover their full potential, and prepare to succeed in the real world as responsible global citizens.

# Imperial International School

## School Purpose

Our aspiration for every student is to reach their fullest potential through a rigorous and challenging curriculum. We encourage our learners to grow into thoughtful, knowledgeable citizens who actively contribute to preserving and enhancing the global community.

**Our Vision** is to encourage life-long learners to be responsible citizens in an ever-changing technological world.

**Our Mission** is to inspire one another as a community to learn, work and play in an atmosphere of collaboration and respect while ethically preparing for a global society.

We train our students in self-directed learning and help them develop strong leadership qualities. The school has a **Student Board** for Middle and High School, composed of student leaders from Grades 7 to 12, who meet regularly to discuss school activities and policies for improvement. In addition, we have a **Stakeholders Committee**, which includes members of the school administration and parent representatives from each student group, to collaborate on enhancing the school experience.

# Imperial International School

**Imperial International School** encourages students to integrate technology into their learning. In addition to having projectors in every classroom, we have provided portable laptops for student use during lessons. We have also introduced the e-learning platform **Classera**, enabling students and other stakeholders to track progress and engage in global-level academic challenges. Recently, we have enhanced our curriculum with **digital resources** to further support interactive and technology-driven learning.

Students participate in **morning broadcast programs** that help them develop confidence and public speaking skills. The school library is equipped with **computers** as well as a wide collection of books, offering resources for research, leisure, and informative reading across all grade levels.

The Science lab is equipped with various scientific instruments. Students engage in lab activities at least once a week. The school also equips an **art room** for students of all level to bring out their inner artists. During the **P.E. classes** the students are trained in various sport activities like gymnastics and basketball.

The school also encourages high level students in the invention program under the **Talent Program** supervised by the Ministry of Education. Students get an opportunity to present their unique talents to fellow students in different schools.

School activities are designed to foster both informative and self-directed learning experiences. Students are encouraged to plan and participate in activities under the supervision of the Academic Principal. Events such as the **Science Fair, Saudi National Day, International Day, and Career Day** focus on academic growth, while activities like **Sports Day, Camping Day, Pajama Day, and Winter Day** emphasize extracurricular development. Together, these experiences provide students with a balanced and enriching school life.

## Notable Achievements

We are proud to have accomplished most of our previous goals while continuously introducing innovative ideas into the learning process. Our efforts have focused on achieving the following:

- Integration of Active Learning Strategies in the Teaching Process

In the **Kindergarten** section and lower grades, students were engaged through activities that stimulated their five senses. This was successfully implemented using games, tools, teaching materials, and even educational trips, moving beyond reliance on books and boards alone.

In the **intermediate and upper grades**, teaching methods focused on students as they are the centre of learning process. Students took on the roles of teachers, scientists, or even actors to present lessons to their peers, while teachers provided guidance and supervision. They also conducted research, surveys, presentations, and seminars, which significantly enhanced their public speaking skills and confidence.

- Raising Teachers' Awareness of the Importance of Student Character Development

Teachers attended workshops to deepen their understanding of their vital role in shaping students' character, fostering positive self-evaluation, and strengthening individual virtues. This initiative was effectively implemented through age-appropriate encouragement systems and additional activities tailored to each student's strengths, regardless of academic level.

- Expanding the Use of Visual Aids Across All Subjects

The school has enhanced the use of visual aids in lessons through two main approaches. **First**, by providing a variety of resources—such as big books, flashcards, interactive read-aloud cards, CDs, and other publisher-supplied materials—teachers were able to easily integrate supportive tools by referring to their teacher editions. **Second**, teachers participated in workshops that equipped them with the skills to create their own visual aids, reinforcing active learning strategies in each subject. In addition, the school supplied teachers with a range of online resources to further support the teaching and learning process.

- **Training Teachers to Stay Updated on Evolving Teaching Strategies**

The school maintains a contract with **Kagan** and **EDI** to provide professional workshops that equip teachers with innovative strategies and support them in achieving their goals in today's modern, technology-driven world. In addition, the Academic Supervisor conducts workshops as needed to address specific areas of growth and improvement.

- **After-School Program for below level students:**

The school offers afternoon tutoring classes tailored to students' individual needs. For every student enrolled in the after-school program, a personalized improvement plan is developed by the program supervisor to support academic progress and raise achievement levels.

## Our Stimulus Program – I CARE

### **I CARE...**

*I CARE* is an incentive program adopted by Imperial International School to inspire and motivate all members of our community to align their practices with shared goals. These goals focus on shaping students' personalities in a distinctive and positive way, enabling them to become effective individuals who can engage meaningfully with global societies. Through this program, students are also guided to become responsible members of their communities, capable of planning their futures positively, effectively, and successfully.

## Areas of Improvement

We are proud to have achieved most of our goals over the past year, yet we recognize that there is still much more to accomplish.

We continue to develop more effective ways of integrating technology into daily classroom practices, ensuring that students actively use digital tools to enhance their learning. Our aim is to train students to harness technology as a powerful educational resource rather than relying on it solely for recreational purposes.

We are introducing more academic activities to demonstrate how students can apply their knowledge in real-life situations and to help them explore career paths that suit their interests and abilities. We are also increasing the number of educational trips, allowing students to see firsthand how what they learn is applied in everyday life. Additionally, we focus on developing students' social skills, guiding them to become active, responsible members of their community who contribute to its improvement.

We aim to cultivate strong leadership and collaboration skills in our students, equipping them to succeed in the future while becoming responsible and engaged citizens.

**In conclusion, we take pride in all that we have achieved and remain passionate about reaching even greater heights. While perfection may be unattainable, our commitment to excellence drives us to be the very best for our students and community.**
